Lednium and Intematix sign License Agreement for White LED Phosphor Technology

Lednium Pty Limited, a wholly owned subsidiary of ASX listed Avatar Industries Limited, announces that it has entered into a phosphor supply agreement with Intematix Corporation of Fremont, California, USA.

Under the terms of the Agreement, Lednium has the right to use Intematix's patented white LED phosphor technology in its Lednium Series LED products. The Agreement is for an initial term of 3 years after which it will automatically be continuously renewed for one year terms subject to each party's right to terminate in certain circumstances.

Lednium's range of products includes the unique multi-chip geodesic dome shaped LED device, the first 3D high powered device on the market geared for general illumination. Lednium's recent introduction of its surface mount Cup Series for low profile high power applications strengthens its portfolio of unique LED package designs.

The patented technology developed by Intematix allows for the progressive development of Lednium white LED devices. Lednium will shortly release an expanded range of white LED products to cater to customer requirements. Intematix holds a large range of patents on phosphors, and has established agreements with several international companies from Korea, Taiwan and Japan.

Lednium recently opened its Malaysian manufacturing operations. Production is to be increased over the coming months to meet expected demand for its products, especially white light engines.

Lednium products have been designed and engineered to meet the highest quality standards on an international level.

About Intematix

Intematix is the leading independent provider of patent protected Phosphors. Intematix has leveraged its Ultra Rapid Combinatorial Discovery Engines to develop a family of very high performance Phosphors enabling the development of Phosphor enabled LEDs for a variety of markets including backlighting, camera flash, signage, LED TVs, projectors, automotive, general warm/cold lighting and a variety of high power applications.
